

TC1037 Group 510 — Course policies

TC1037 · Algorithmic Thinking · Group 510

Departamento de Computación — Escuela de Ingeniería y Ciencias — Campus Querétaro
Periodo 2 y 3, September–December 2026

Professor	Dr. Leopoldo Rodríguez Salazar — rodriguez.l@tec.mx
Schedule	Tuesday & Friday, 17:30–19:00, room 4206
Language	English. Every new technical term is glossed in Spanish. Exams are bilingual.
Laboratory	Friday, 16:30–17:30, room 4206 — immediately before our Friday class. Teaching Assistant: Luis Germán Castañón Cortés (luis.cast@tec.mx)
Asesorías	Tuesday, 16:30–17:30, Room 4206 (in person). Other times via Teams by appointment — ask through Canvas Inbox.

Class starts **five minutes after** the hour and ends **five minutes before**: we run 17:35–18:55.
Arrive at 17:30.

Before, during and after a session

- **Before** — you review the assigned autoestudio material (a reading or a video). It is short.
- **During** — we open with your questions on it, then I may ask you about it, then we write code together. Class time is for you writing and breaking programs, not for watching slides.
- **After** — homework, with a fixed deadline, usually Sunday 23:59.

How you are graded

Weight	Component
4%	Adaptive levelling module — <i>¡Estudia el módulo de nivelación!</i>
1%	Final prior-knowledge diagnostic
12%	Quick exams
10%	Laboratories
4%	In-class activities
4%	Homework
20%	Midterm — Friday 23 October
15%	Situación problema
30%	Final — Tuesday 1 December

Weight	Component
100%	

Quick exams

One per week, 15–20 minutes, at the start of the Tuesday session, covering **the previous week's** topic. The following session we resolve doubts and close the topic. Because this subject builds on itself, a quick exam may include earlier material. They are taken on the stated date only.

Laboratories

The lab is a **supervised start on that week's homework**, with the Teaching Assistant present. The TA's job is to answer your questions while you work — not to solve the exercises for you and not to grade you. The TA records who attended and what you completed, and may grant extra time if you need it. When you finish, you may leave.

No AI in the lab. No AI in class. This applies to every TC1037 group.

Attendance

Attendance is taken in the **first 5 minutes** of each session. Our class starts at **17:35**, so roll call is 17:35–17:40. **After 17:40 you are marked absent**, and that session's activity is graded zero.

This is tighter than it looks: arrive at 17:30.

Attendance is not itself weighted. However — **activities and exams exist only during the session**. If you miss a class or lab, that session's activity is recorded as zero. There is no late version at reduced credit. If you miss a session, ask a classmate what was covered; asesorías are for resolving doubts, not for repeating the class.

Note our Friday shape: **lab 16:30–17:30, then class 17:35–18:55, same room**. That is a long block. Eat beforehand — not in the room.

Some instructions are given only verbally in class. “I didn't know” and “it wasn't written in the activity” are not grounds for an incomplete or late submission.

Homework

Every deadline is **fixed and final**. After the deadline, submissions are not received. All work is individual unless it explicitly says otherwise.

Situación problema

A four-stage project: you choose a real dataset, ask questions of it, and build a Python program that answers them.

Stage	Due	Mode
1 — Dataset selection	Friday 6 November	Teams of 2
2 — Driving questions	Friday 13 November	Teams of 2
3 — DataFrame	Friday 20 November	Teams of 2
Final — Analysis, plots, recommendation	Friday 27 November	Individual

Submitted through Canvas. Not by email, and not after the deadline.

Each missed or late stage costs 5 points off your final situación problema grade.

Spelling and writing quality are graded on this component. You are presenting an analysis to a business; it has to read like one.

Software and exams

- **Thonny** — our programming environment. Install it in week 1.
- **Respondus LockDown Browser** — required for every exam. Install it in week 1 and complete the practice exam before the deadline.
- **Trinket** — the in-browser Python editor used inside Canvas exams. We will use it in class at least once before your first quick exam, so it is not new to you under exam conditions.

Thonny may not be used in any exam. Macs may not be used for any exam — this is an academia-wide restriction. If you only have a Mac, tell me in week 1 and we will arrange it.

During an exam, your phone is permitted only for the initial authentication. Any other external communication tool is prohibited.

Classroom and laboratory care

- No food or drink in the room. Crumbs and spills destroy the machines.
 - Bottled water with a sealed lid only, kept in your bag on the floor — never on a desk.
 - Do not unplug, swap or move keyboards, mice, monitors or their cables.
-

Academic integrity

Copying and plagiarism, in whole or in part, are serious offences. Per Institute policy, **any breach of academic integrity is recorded as a failing grade and reported to the Campus Academic Integrity Committee**. That is not a course-level decision and it is not negotiable with me.

AI use has its own policy. Read Using AI in this course; it is handed out with this document and it is specific. The short version: AI to understand, never AI to produce. You will be asked to explain your own code out loud on project deliverables and selected labs.

Dropping the course

Deadline to request a *baja* for this unit: **Friday 13 November**.
