AI for Scientific Writing — Session 3 worksheet

Debate · dilemmas · principles · publisher policies · declaration · letter — Semana Tec, Tec de Monterrey, Oct 2026

lrodriguez15.github.io/ai-scientific-writing.html

1. Debate (Activity 7) — when does AI stop supporting learning and start replacing it?

	Your team
Zone (A: learning tool · B: risk, academic shortcut)	
Our argument (ethical or academic)	
Strongest counter-argument (according to the AI)	
Two weaknesses in our reasoning	
We would change our mind if…	
Final position (max. 200 words, in the shared document)	

Prompt for your room: *This is our position: ____. Our argument: ____. Give us the strongest counter-argument, point out two weaknesses in our reasoning, and tell us under what conditions we should change our mind.*

Close: AI supports learning when _____. AI replaces learning when _____.

2. Dilemmas (Activity 8) — ethical, grey zone or misuse?

Situation	Ethical / grey / misuse	Why?
Claude rewrote your whole Introduction and it is better.		
You translated an English paper with AI and cited the original.		

Situation	Ethical / grey / misuse	Why?
AI gave you a perfect reference you can't find.		
A classmate does not declare their AI use.		

Concepts. *Academic integrity:* honesty about who did what. *Authorship:* whoever answers for the content (AI cannot). *Plagiarism:* presenting someone else's work or ideas as your own, including an AI's.

3. Five principles for using AI at university (group list)

1. _____
2. _____
3. _____
4. _____
5. _____

4. What publishers ask for (summary; always check the journal's policy)

Publisher	AI as author?	Where to declare?	AI images
Springer Nature	No	Methods (or equivalent section); copy-editing need not be declared	Not allowed (with exceptions)
Elsevier (upd. Aug 2026)	No; humans are accountable	AI declaration at submission; Methods if used in the research; basic spelling and grammar: no	Explanatory diagrams yes, noted in the caption; research data and images no
IEEE	Authors are accountable	Acknowledgments: tool, sections, extent of use; grammar editing: declaring recommended	Declared (text, figures, code)
Taylor & Francis	No	Methods or Acknowledgments, with tool and version	Not allowed

5. Declaring and citing AI use

AI use statement: *While preparing this work I used [tool, version] to [purpose and sections]. I reviewed and edited the content and take full responsibility for the result.*

APA 7 citation of the tool: Anthropic. (2026). *Claude* [Large language model]. https://claude.ai — (adapt author, name and URL to the tool you used).

AI is **not a source**: cite the original paper you opened and checked.

Before you accept AI text: can I explain it without the AI? Did I verify it in a reliable source? Would I declare it out loud? Did I learn something, or just hand something in?

6. Ethics checklist for Task 6

- ☐ Complete AI use statement (tool, version, purpose, sections)
- ☐ Every reference opened and verified (working DOI or link)
- ☐ No invented data, results or quotes
- ☐ Figures checked; caption note if AI was used
- ☐ Other people's ideas cited, even if AI summarised them for you
- ☐ Your voice, not the model's

7. Letter of responsible AI use in academic life (Activity 10)

I, _____, student ID _____, commit to:

1. _____
2. _____
3. _____
4. _____
5. _____

Signature: _____ Date: _____

Individual submission in Canvas: `Matrícula_Carta compromiso firmada.pdf` — due **Thursday 29 at 18:00**.
